IRWIN I. KIMMELMAN
Attorney General

COLONEL C. L. PAGANO
Superintendent

Dear Reader:

As in the past, the State of New Jersey will once again be regarded as one of the safest states in the nation. We believe the major factors attributed to this reduction were the continuing alcohol awareness programs, the mobile D.W.I. patrols, and the sobriety checkpoints conducted by both state and local law enforcement agencies.

The statistics for 1984 indicate a death rate of 1.7 for every 100 million miles traveled.

This report constitutes a detailed look at the causes and results of fatal accidents throughout the state during 1984. Hopefully, the continued efforts and cooperation of the public, federal, state, and local agencies will help us maintain our traffic safety record in the years ahead.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1984.

Sincerely,

Clinton L. Pagano

M. ALCOHOL FACTOR

There were 922 Fatalities during 1984. Of this total, 731 were tested for alcohol and 191 were not tested. The various reasons for those not tested were: delayed deaths; age factors; contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause tests to be performed on victims. Of the Fatalities, 466 were drivers; 177 passengers; 248 pedestrians and 31 pedalcyclists. Of the 731 tested, 333 were positive for alcohol in varying degrees and 398 were negative. This would indicate 45.6% of the fatalities tested were positive for alcohol and 54.4% were negative.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. **Drivers:**
   There was a total of 466 drivers killed, of which 403 were tested. Of those tested 200 were positive and 203 negative, for a 49.6% alcohol factor. The .10% and over alcohol level, has the largest number listed. Of the 200 imbibing drivers, 151 or 75.5% had an alcohol level of .10% or higher.

2. **Passengers:**
   There was a total of 177 passengers killed, of which 118 were tested. Of those tested, 47 were positive and 71 were negative for a 39.8% positive alcohol factor.

3. **Pedestrians:**
   There was a total of 248 pedestrians killed, of which 187 were tested. Of those tested, 80 were positive and 107 negative for a 42.8% alcohol factor.

4. **Pedalcyclists:**
   There was a total of 31 pedalcyclists killed, of which 23 were tested for alcohol content. Of those tested, 6 were positive and 17 negative for a 26.1% alcohol factor.

SPECIFIC AREAS OF CONCERN

INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 91.31% completed. Of the 418.65 miles of roadway which are projected for this system, 382.26 miles have been opened to the motoring public. With this number of roadway miles open through a variety of areas such as rural, urban, flat, hilly, etc., an equal variety of accidents have become prevalent. Beyond the smaller "damage to property" type of accidents we are now encountering the non-repairable . . . the human fatality. Twenty-three percent of the forty-seven (47) fatal accidents which occurred during 1984 involved pedestrians. Twenty-five percent of the accidents had alcoholic beverages contribute heavily towards causing the accidents. Over the twelve month span, the death rate averaged 3.9 deaths per month, and one death for every 8.1 miles of roadway. In order to have a clear, concise picture of the type and age of victim, as well as the manner and contributing factors of these fatal motor vehicle accidents, the following facts are outlined for you.

* One Driver Under Influence of Drugs

NEW JERSEY STATE POLICE — AGE OF MAJORITY

The enactment of Senate Bill S-992, that became effective on January 1, 1973, added over one-half million potential drinking drivers to our highways. Accident statistics are available for this age group (18 - 19 - 20); however, alcohol involvement relative to accidents is available only in accidents where fatalities occur.

Listed below are statistics indicating the involvement of **drivers** in accidents in the **18 to 20 year-old age group**. The year 1972 is used as a base, being the year prior to the Age of Majority.

Years	Total Accidents	Total Injury Accidents	Total Fatal Accidents 18 - 20 Drivers	Total Drivers Involved	Number of Drivers Drunk	Percent of 18 - 20 Drivers Drunk

On January 2, 1980, Senate Bill S-1126 was signed into law as Chapter 260, Laws of 1979, which extends to persons 19 years of age and older the right to sell, purchase and consume alcoholic beverages. The figures below reflect those drivers in the 19 - 20 year-old age group.
